Independent Mapei Expansion Ageing Test

Expansion Ageing Test

✓ Planks were sent to Mapei for independent testing.

✓ Dimensional stability testing was conducted in accordance with EN1903 'Test method for adhesives for plastic or rubber floor coverings or wall coverings: Determination of dimensional changes after accelerated ageing'. The plank was heated to 80 degrees for 6 hours. The change in length and width were recorded. The plank was then allowed to cool down and is remeasured after 24 hours.

✓ Mapei allows a maximum dimensional change of 0.2% when assessing adhesive suitability.
